

Your complete cloud geospatial solution. Rich GIS functionality. Flexible, scalable and secure.

GEOCIRRUS delivers spatial information, tools and applications that help you make better decisions.

Stream spatial content, analyze patterns, solve problems and share your ideas and maps, all from your web browser or mobile device.

Premium content

Stream aerial and satellite imagery, terrain models and base maps, LiDAR point clouds and 3D building models.

Industry-specific solutions

Simplify and improve business processes within government and utilities, infrastructure, mining and resources, renewables, environment, agriculture and Smart Cities.

Integration

Connect the open GEOCIRRUS platform with your corporate IT systems and web applications.

Need premium or industry-specific content, smart tools for complex analytical problems or easy access to a map of your assets?

Think GEOCIRRUS.

Device independence

Accessible on your desktop, tablet or mobile device.

Sophisticated tools

Query and edit datasets, measure and markup maps and assets, run reports, print and share maps.

With GEOCIRRUS you can easily create, analyse, share and view maps and location information—**any time, anywhere** and on **any device**.

Because GEOCIRRUS is in the cloud it is also

- **Scalable**
Meet your demand peaks and troughs.
- **Secure**
Control access to your data and applications.
- **Available**
On-demand spatial content, tools and applications.
- **IT resource independent**
Eliminate expensive, specialized software and IT management overhead.
- **Flexible**
Break away from the traditional software model and pay for what you use, when you use it.

Find a GEOCIRRUS solution to meet your needs

GEOCIRRUS ORIGIN

GEOCIRRUS Origin is our **premium content** service. Select from an extensive catalogue of base maps, aerial and satellite imagery, terrain data and 3D models. Or, add content from third party map services and providers. GEOCIRRUS Origin also provides a secure, and cost effective, storage solution for your own content. This reduces the need for in-house infrastructure and IT resources.

GEOCIRRUS NODE

GEOCIRRUS Node provides **workflows and APIs** that integrate GIS data and applications into your business processes. GEOCIRRUS Node helps you manage energy and infrastructure project permits, calculate solar potential in the renewable energy sector and plan new urban precincts in our cities.

GEOCIRRUS EDGE

GEOCIRRUS Edge enables **easy and secure** sharing of rich geospatial content through our GIS viewer. Interrogate data, print high resolution maps, design and build workflows and run reports from your browser or smart device. It's instant web GIS.

GEOCIRRUS LINK

GEOCIRRUS Link gives you direct **access to our team** of geospatial professionals. Whether you need data collection, GIS-enabled work flows, complex analysis, or to visualize a transport network, our experienced team can help develop your GEOCIRRUS solution.
